

There is a virus traveling around the world.

This virus (coronavirus) can make some people sick.

So, what can we do to keep ourselves safe?

Wash your hands often with handwash or soap.

Don't touch your eyes, nose or mouth.

In order to protect others from the virus...

...cough or sneeze into your elbow or on a tissue that you will throw in the bin, and wash hands again!

And, some of us will need to stay home for some days.

Until it's safe to go out.
